

SUYASH ZINJURKE

AI Engineer | Python Automation | NLP | Data Analytics
zinjurke77h@gmail.com | +91 7028921574 | Pune, India
HackerRank | **GitHub** | **LinkedIn**

EDUCATION

AISSMS IOIT

B.Tech in Artificial Intelligence & Data Science
CGPA: 7.92

Pune

Sep 2022 – Jun 2026

EXPERIENCE

Knorr-Bremse Technology Centre India | AI & Automation Intern

Pune | Mar 2026 – Present

- Built Python automation scripts to reduce manual workflow effort.
- Applied AI-based methods to analyze logs and support debugging.
- Analyzed embedded codebases to understand system architecture and optimize components.
- Developed internal tools for code visualization and workflow improvement.

NexGen Analytix | Data Analytics Intern

Pune | Feb 2025 – Apr 2025

- Created Power BI and Tableau dashboards to track KPIs and business metrics.
- Built ETL pipelines using Python and SQL to process and structure raw datasets.
- Optimized reporting workflows, reducing manual effort and improving data accessibility.

SKILLS

Programming Languages:	Python
Libraries/Frameworks:	Pandas, NumPy, Flask, Scikit-learn, Matplotlib, OpenCV
Data Engineering:	ETL Pipelines, Data Cleaning, API Extraction
BI / Visualization:	Power BI, Tableau
Cloud / Warehousing:	Google BigQuery, AWS (Basics)
AI / NLP:	Transformers, LangChain, FAISS, TensorFlow
Databases:	SQL

PROJECTS / OPEN-SOURCE

AI Interview System with Chairman Council Architecture

Python, LangChain, LLM

GitHub Repo

- Developed an AI-driven interview system using LLMs for dynamic question generation and evaluation.
- Implemented multi-agent "Chairman Council" architecture for decision aggregation and response validation.
- Built context-aware Q&A pipeline using LangChain with structured prompt engineering.

BigQuery ETL Pipeline Project

Python, Pandas, SQL, BigQuery

GitHub Repo

- Designed ETL pipeline to ingest, clean, and transform large datasets using Pandas.
- Automated data loading and built optimized SQL aggregation tables in Google BigQuery.

Credit Card Transaction & Customer Dashboard

Power BI, Python, SQL

GitHub Repo

- Developed interactive Power BI dashboard to analyze transaction trends and customer segments.
- Built data preprocessing pipeline using Python and SQL for structured analytics.

Smart Agriculture Crop Prediction

Python, SVM, TensorFlow

GitHub Repo

- Built ML models (VGG16, XGBoost) achieving 85% accuracy for crop prediction.
- Engineered features using soil, humidity, and temperature for recommendation system.

CERTIFICATIONS

- Oracle Cloud — Generative AI Professional
- Oracle Cloud — AI Foundations Associate
- Master Tableau — iNeuron
- Power BI Data Visualization — Simplilearn
- Data Analysis with Python — IBM
- AI For India 2.0 — GUVI
